

ROCKY MOUNTAIN REGIONAL VA MEDICAL CENTER FACT SHEET

VA

U.S. Department
of Veterans Affairs

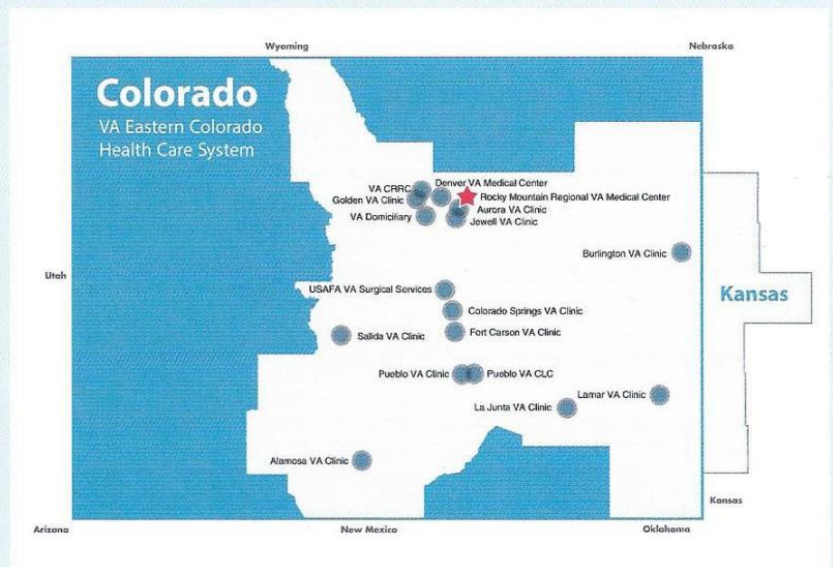

The Rocky Mountain Regional VA Medical Center is a welcomed step forward in meeting the increased health care needs of today's Veteran population. This new facility replaces the Denver facility of 670,000 square feet with a new state of the art campus of approximately 1.2 million square feet on 31 acres, providing many new services to Veterans.

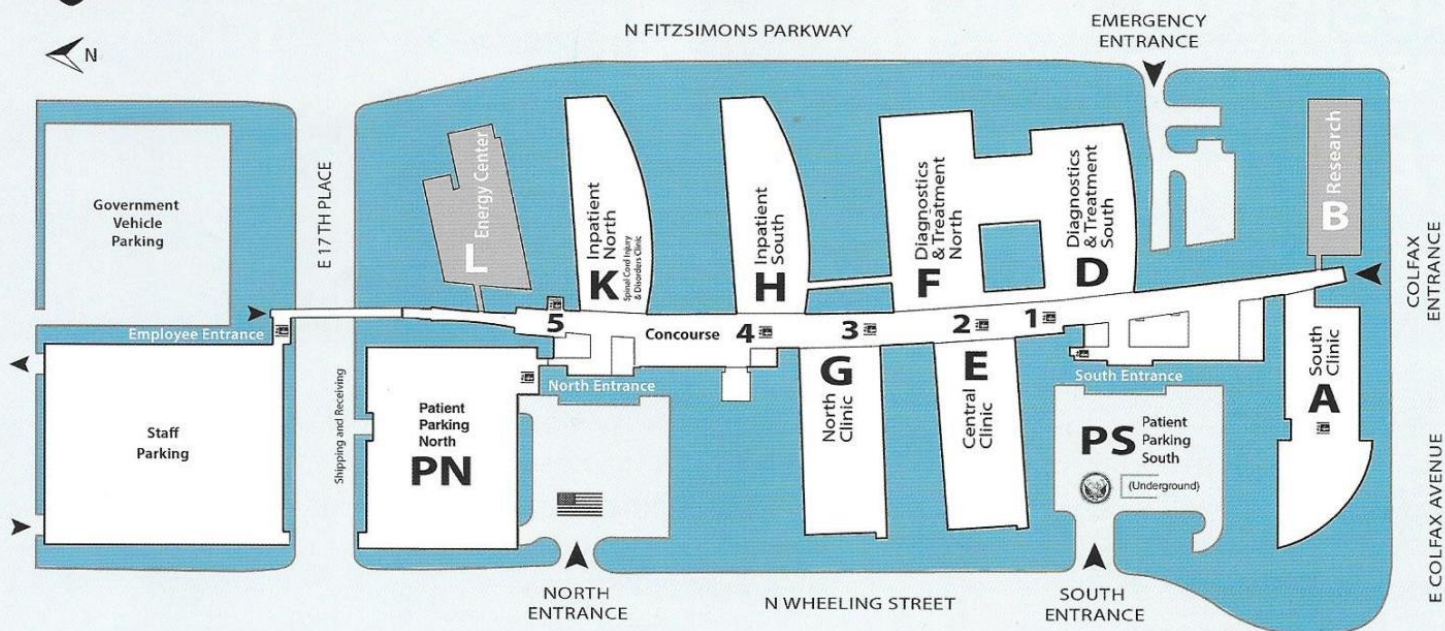

The new Aurora, Colorado location is ideally located on the southeast corner of the former Fitzsimons Army Base just off Interstate 225, immediately west of RTD's light rail station and neighboring Children's Hospital and the University of Colorado Anschutz Health Care Campus. Leading edge technology is designed into every aspect of the new campus, bringing Veterans high quality health care well into the 21st century. Guiding principles for the new campus include patient safety, improving the Veteran's health care experience, promoting the family's role in care delivery, and protecting our environment through green design.

VA and the Rocky Mountain Regional VA Medical Center exemplify President Lincoln's promise "to care for him who shall have borne the battle, and for his widow, and his orphan" by serving and honoring the men and women who are America's Veterans.

We are particularly honored and committed to serving Colorado's Rocky Mountain Region Veterans. The VA Eastern Colorado Healthcare System's specialized personal care epitomizes excellence in health care. Through a unique combination of medical center-based and local community-focused medicine, we bring innovative and leading-edge care to Veterans throughout the region.

The existing Denver VA Medical Center, located at 9th and Clermont Street, opened in 1948. The original structure has served generations of Veterans. The hospital has evolved over the past 70 years, as new buildings and services were added to meet a growing demand. Last year, the VA Eastern Colorado Health Care System supported more than 1,033,000 outpatient health care visits.
